

The 1242 Horn Travel Case...

Storage... Protection... Roadability...

Altec Lansing has recognized the fact that unprotected horns cause problems for traveling musicians. To alleviate this we've designed the 1242 Horn Travel Case. Constructed of rugged materials, the 1242 will provide unrivaled protection for your 511B horn.

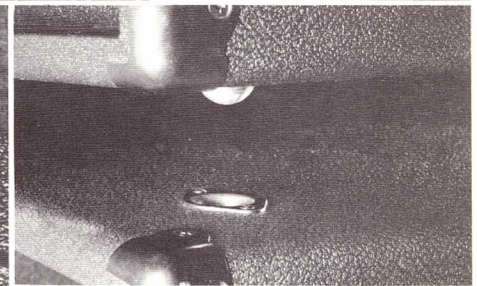

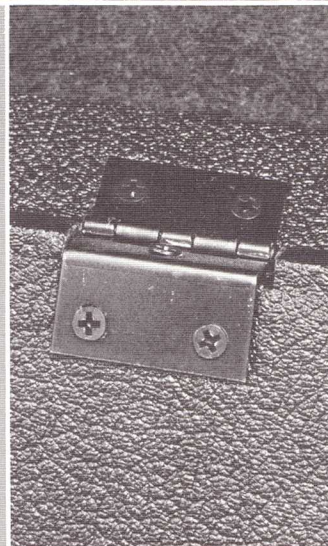

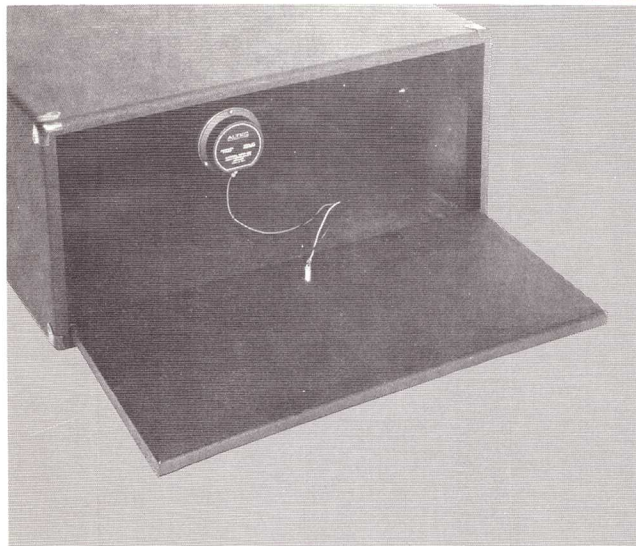

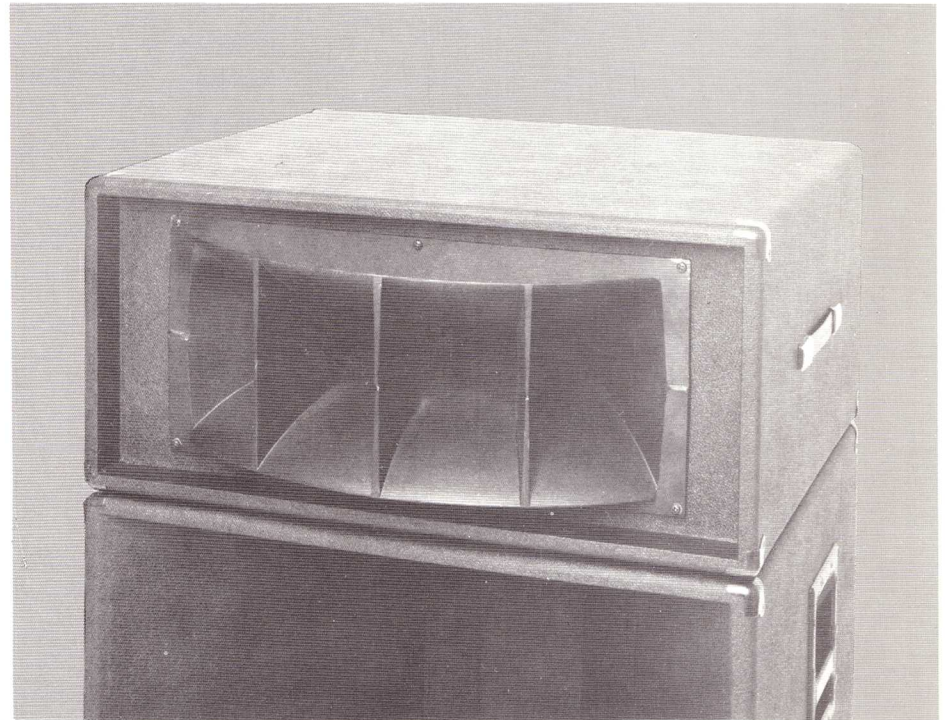

As a traveling musician, you will be aided greatly by one important feature of the 1242. In the back of the cabinet is a **large storage** area of approximately 4 cubic feet. This area may be used for storing microphones, cables, or other accessories that you feel are necessary to your performance. The door to the storage area is attached to the cabinet with **sturdy hinges** that allow for easy access. A **latch** is provided so that the door will remain closed during traveling.

The 1242 is designed to house the 511B horn with the 808-8B driver mounted as one unit. The dimensions of the 1242 (14"H x 30"W x 26"D) indicate that it can easily fit on top of the 816V or the 828C enclosures. **Metal feet** lock into recessed cups on top of the 816V for a secure hold.

Finished in black leather-grained vinyl,

the 1242 Horn Travel Case resists wear and abuse. For added protection **steel corner guards** are mounted on all four sides.

Featuring convenient handles and weighing only 55 lbs., the 1242 boasts portability. A 1/4 inch phone jack is installed in the rear of the case to simplify the connection of speaker wires.

1515 South Manchester Avenue, Anaheim, California 92803
